HoloCine

- [HoloCine: Holistic Generation of Cinematic Multi-Shot Long Video Narratives](#)
- <https://arxiv.org/abs/2510.20822>
- CVPR 2026

HoloCine is a holistic framework for generating cinematic multi-shot long video. It leverages a large language model (LLM) to generate a detailed narrative, which is then used to guide a video generation model. The framework consists of a self-attention-based cross-attention mechanism and a prompt-based generation process. The video is generated at a resolution of 400k.
